

# Webex Meetings integration

Last Modified on Oct 18, 2022

The OnceHub connector for Webex Meetings completely automates the provisioning of Webex Meetings sessions. Customers receive a single OnceHub confirmation including all meeting details in their local time zone. This saves time, increases participation rates, and conveys a professional image to your customers.

## Benefits of the Webex Meetings integration

### Schedule one-on-one meetings and group sessions

Each booking creates a new Webex Meetings session. When multiple Customers sign up for the same session, such as a webinar, each booking receives the same Webex Meetings details.

### Automatically provision Webex Meetings sessions

When Webex Meetings is set as your default web conferencing option, a Webex Meetings session is automatically created whenever a booking is made.

### Automatically generate integrated notifications

Webex Meetings session details are an integral part of all OnceHub notifications, enabling your Customers to receive a single confirmation with all required information. This saves time and provides a professional image to your Customers.

### Configure by Booking page

Our Webex Meetings integration provides direct access to Webex Meetings audio settings, allowing you to set audio connection options for each Booking page.

### Integrated canceling and rescheduling

When a booking is canceled or rescheduled by either the Customer or the Owner, the necessary updates are automatically made in Webex Meetings.

### Set a password for the session

You can require your Customers to enter a password when launching the Webex Meetings application at the time of the meeting.

#### **Note:**

Webex Meetings integration supports OAuth 2.0 authentication for paid Webex Meetings accounts. Your administrator must have enabled third-party authentication for your account.

If you have a free Webex Meetings account, you must use your Webex Meetings-specific credentials to connect. [Learn more](#)
