

Introduction to iCloud Calendar connection

Last Modified on Dec 20, 2020

Connecting OnceHub to your iCloud Calendar ensures a real-time integration between your iCloud Calendar appointments and your busy time in ScheduleOnce.

Connecting and configuring your iCloud Calendar

Any iCloud Calendar User can connect to OnceHub.

For each of your [ScheduleOnce Booking pages](#), you can select the calendar that bookings will be created in, the calendars that busy time will be retrieved from, and any additional calendars you want to create an event when a booking is made.

Important:

Apple requires Users to use app-specific passwords for all third-party applications such as OnceHub. An app-specific password is a single-use password for your Apple ID that lets OnceHub securely access the information you store in your iCloud calendar.

This access method enhances your security and privacy, and requires that you turn on Apple two-factor authentication or Apple two-step verification. [Learn more about iCloud app-specific passwords](#)

Privacy and security

When you connect OnceHub to your iCloud Calendar, all credentials and data traffic are fully encrypted. Your

calendar information is always kept private and free/busy patterns are never revealed to Customers.
