

Personalizing with dynamic URL parameters

Last Modified on Jul 16, 2020

Personalized links using [URL parameters](#) are [Booking page](#) links that contain Customer information and [Booking form](#) data. With **Personalized links (URL parameters)**, prospects and Customers click on your Booking page link and pick a time, without having to provide any information that is already known to you.

The Booking form can either be [prepopulated with their details](#) or skipped altogether. You can also add [source tracking](#) tags to personalized Booking page links, letting you analyze where your bookings come from.

Note:

When you use Personalized links with Booking pages that are [not associated with any Event types](#), it is highly recommended you provide the **Subject** field of your Booking form.

You can do this by going to **Setup -> ScheduleOnce setup -> Relevant Booking page -> Booking form and redirect**. In the **Meeting subject** section, select **Meeting subject is set by the Owner (you)**. You can then enter a meeting subject for your specific business case.

[Learn more about the Subject field](#)

Creating a Personalized link (URL parameters)

1. From the **Schedule button**, click **Publish on your website** in the lefthand sidebar.
2. Select the **Mail merge** tab.
3. Select the relevant Booking page in the drop-down menu (Figure 1).

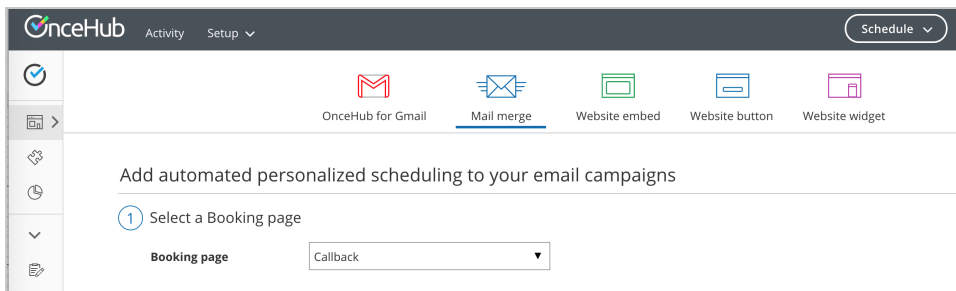

Figure 1: Select a Booking page drop-down menu

4. In the **Customer data** step (Figure 2), select **Personalized link (URL parameters)**.

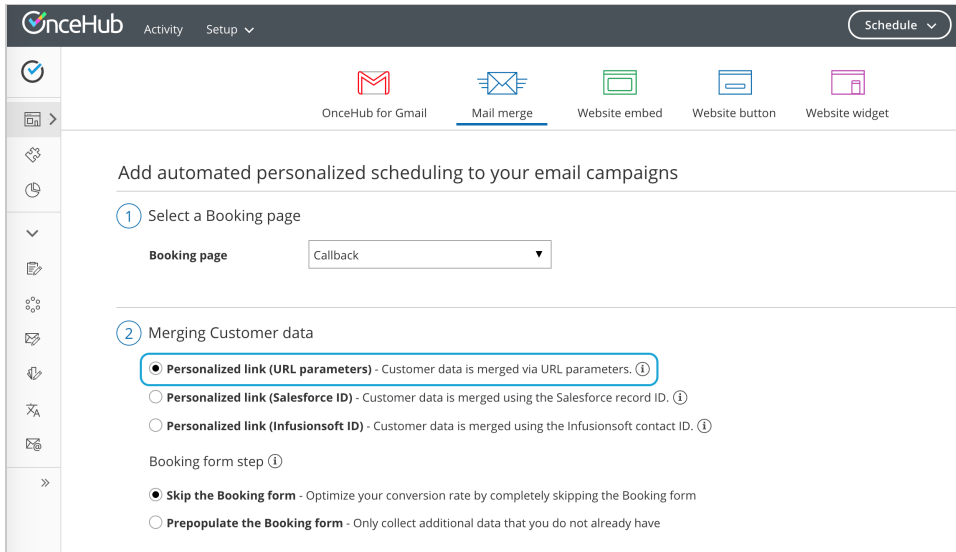

Figure 2: Customer data step

5. In the **Booking form step**, you can select one of the two options below:

- **Skip the Booking form:** Skipping the Booking form helps you maximize your booking conversions and provides your Customers with a quicker booking process.
- **Prepopulate the Booking form:** If you select this option, the booking data is visible in the Booking form and can be edited by the Customer before submission. [Learn more about prepopulated Booking forms](#)

6. In the **Copy link** step, click **Copy link** to copy the Personalized link to your clipboard (Figure 3).

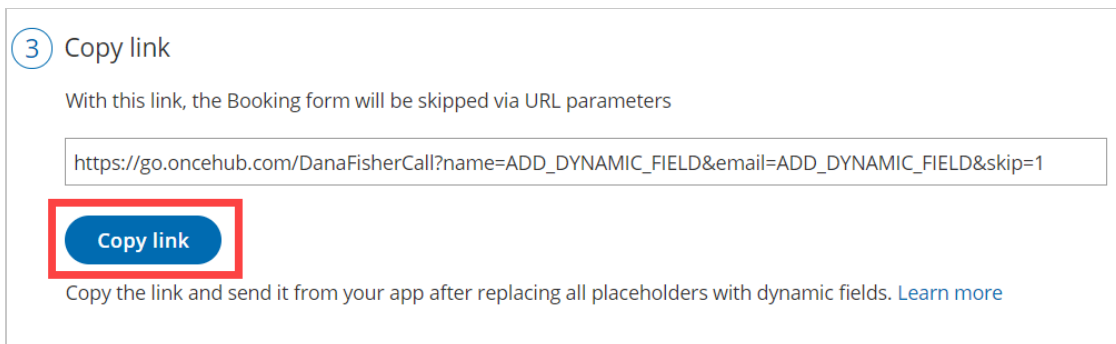

Figure 3: Copy link step

Adding your own URL parameters

If you need to replace the **ADD_DYNAMIC_FIELD** placeholders (Figure 4) with your own parameters, you can copy the link to a notepad. [Learn more about supported ScheduleOnce URL parameters](#)

Merged values must be properly encoded in order to be passed in the URL. Some characters like at (@), period (.), dash (-) and underscore (_) are OK, but all URL invalid characters like plus (+) or space () must be URL encoded.

3 Copy link

With this link, the Booking form will be skipped via URL parameters

```
https://go.oncehub.com/DanaFisherCall?name=ADD_DYNAMIC_FIELD.&email=ADD_DYNAMIC_FIELD.&skip=1
```

Copy link

Copy the link and send it from your app after replacing all placeholders with dynamic fields. [Learn more](#)

Figure 4: ADD_DYNAMIC_FIELD placeholders

For example, if you use [MailChimp](#), the link might look like this:

```
https://go.oncehub.com/dana?name=*/NAME/*&email=*/EMAIL/*
```

In this example, the ***|NAME|*** and ***|EMAIL|*** fields are merge fields which are replaced with a single Customer name and email respectively during the email campaign, creating a personalized email for each lead in your list.
