

What's new in version 4.6?

Last Modified on Feb 28, 2019

Version 4.6 includes many small improvements and one noticeable change – We have reorganized some pages and settings in the Administration side of the product and made it simpler and easier to understand. This is an important change that will make it easier to expand the system while keeping it simple and easy to use.

Here is the list of changes:

New Setup page

The new Setup page is where you can find all required settings for the configuration of the system. You can create and manage MeetMe pages, Services, BookNow pages, edit Group scheduling settings and edit personal settings that were previously in the Account page.

New General tab

A new General tab was added under the Setup page. It includes some settings that were previously in the Account page and Group scheduling settings – Default meeting duration, Invitee time zone enable/disable and reminder settings.

Home page update

The Home page was updated with clearer terminology and icons for group scheduling and Customer self-scheduling. Customers on Workgroup and Enterprise accounts will see the MeetMe Profile picture in the activity stream. This will assist in identifying the MeetMe page that was used for the booking.

The Account settings

After moving some of the Account settings to the General tab under setup, we have made some minor changes to the organization of the remaining account settings.

If you have any questions about the new release feel free to [contact us](#).
