

# Integrating Zoom through Zapier

Last Modified on Dec 13, 2021

Zoom integration [through Zapier](#) allows you to create a new meeting in Zoom when a booking is made via OnceHub.

## Note :

We recommend using our [native Zoom integration](#) for seamless updates throughout the booking lifecycle. Zapier integration creates a Zoom meeting when a new booking is created, but does not update the booking details when changes are made.

## Requirements

Before integrating Zoom with OnceHub, you must:

- Have a [Zapier account](#).

- Have an [active Zapier connection in your OnceHub account](#).

## Integrating Zoom with OnceHub

OnceHub created [recommended Zap templates](#) that enable the following scenarios.

### Update Google Calendar events with Zoom meeting links when new bookings are made via OnceHub

Update Google calendar events with Zoom meeting links when new bookings are made via OnceHub [Use this Zap](#). If you are using [OnceHub with Google Calendar](#), an event is created in the connected calendar and can be added to the Customers' calendar. When using this Zap template, a new Zoom meeting is created whenever a booking is made via OnceHub and the Zoom meeting link is automatically inserted into the location field of the Google Calendar event.

Your customers then receive an updated Google Calendar invite with the Zoom meeting link, allowing them to access all relevant booking details from one single place, without any effort on your part.

### How does this integration work?

- A new booking is made via OnceHub

- Zapier creates a new meeting in Zoom

- Zapier finds the matching Google Calendar event

- Zapier updates the event's location field with the new Zoom meeting link

### Create a new Zoom meeting and send Customers the Zoom link via email

If you are using ScheduleOnce without a calendar integration or are connected to a different calendar than Google Calendar via OnceHub, you can use this Zap template to notify your customers when a new booking is made in

OnceHub. Zapier will create a new meeting in Zoom, and then email your customer with the information, ensuring they have all the details they need.

**How does this integration work?**

A new booking is made via OnceHub

Zapier creates a new meeting in Zoom

Zapier sends out an email with all the information for the meeting
