

Introduction to single-user scenarios

Last Modified on Jun 2, 2023

OnceHub allows you to offer multiple meeting types on your [Booking page](#) or [Master page](#). There are three ways to offer multiple meeting types using [Event types](#), [Booking pages](#), and [Master pages](#).

Accept appointments for yourself

If you accept appointments for yourself, Customers come to your [Booking page](#) and book appointments with you [automatically or with your approval](#). If you offer only one meeting type, you can use an [Event type](#) and link it to your [Booking page](#).

For example, let's say you offer a 60-minute tax return preparation session for a fee of \$100. [Create an Event type](#), customize the settings to meet your requirements, and [associate it with a Booking page](#).

Offer different appointment types on your Booking page

If you offer multiple meeting types which all have the same availability and same location, then all you need is one [Booking page](#) with multiple [Event types](#) linked to it. Each [Event type](#) can be a different meeting type with its own settings. You can configure the [Scheduling options](#), [Time slots](#), [Booking form](#), [Customer notifications](#) and the [Payment and Cancel/Reschedule](#) policies for each [Event type](#).

For example, you might offer a 15-minute introductory session for free, a 30-minute online consultation session for \$50 with a lenient reschedule/cancellation policy, and an hour long face-to-face consultation for \$100 with a strict reschedule/cancellation policy. This is possible using multiple [Event types](#) with different configurations on your [Booking page](#).

Use both Event types and multiple Booking pages together

[Event types](#) and [Booking pages](#) can be used together to meet a wide range of scheduling scenarios for offering [Event types](#) at different locations or at specific hours or days.

For example, let's say you're providing [Event types](#) in three locations and you're in different locations during different days of the week. Define the [Event types](#) that you provide and set each [Booking page](#) to be a location. You can set up your scheduling process so that Users will first select an [Event type](#) and then a location, or vice versa. In this specific scenario, you'll create the [Booking pages](#) and the [Event types](#), link the [Event types](#) to the [Booking pages](#), and then link the [Booking pages](#) to a [Master page](#).
