

Sharing your chatbot

Last Modified on Feb 16, 2023

Sharing your chatbot

You can share your chatbot in 3 ways. To select a sharing method, go to the **Share** tab.

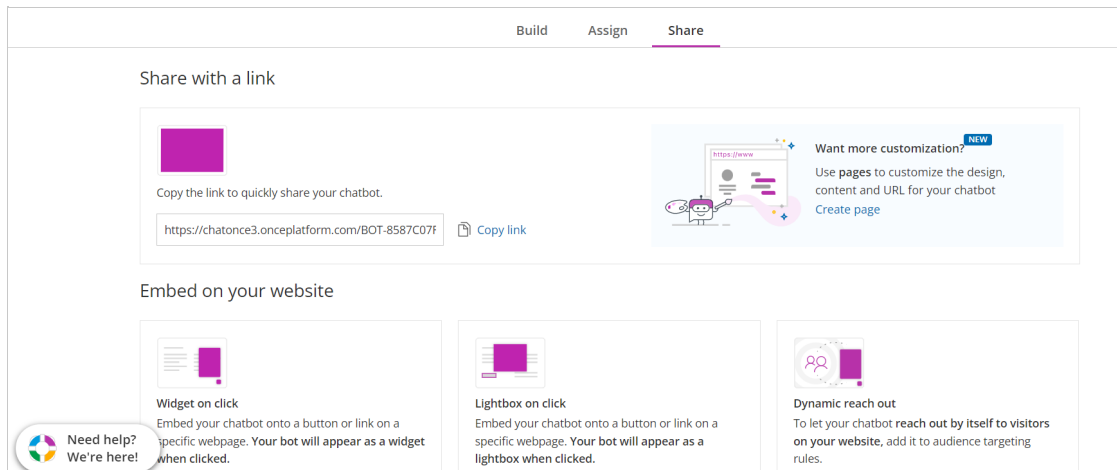

Figure 1: Sharing your chatbot

1. Share as a link

You can share your chatbot as a standalone page which requires no website. Simply copy the link and send it to whomever you like.

2. Share as a page

You can create a standalone page and add a chatbot to it. This option allows complete customization of your chatbot so that you can match it to your branding. Once you have customized the page, you can simply click on **Get page URL** at the bottom of the screen.

3. Embed on your website

Choose between three publishing options:

- **Lightbox:** Opens over the whole website when a visitor clicks on a link or a button.
- **Widget:** Pops up on the bottom right of the screen, within a chat frame. The visitor interacts with your chatbot within the widget and can still scroll through the website page.
- **Dynamic reach out:** Reaches out automatically to an audience defined by you.

Install the code

Grab the code you need for your website.

Lightbox and widget

Once you click on the **Widget** or **Lightbox** option, you'll be directed to a page where you can **Get the code**. Add

the code to your website on each individual page where you want the chatbot. This may involve creating an html widget, block, or some other custom html element, depending on how you build your website and which service hosts it.

Dynamic reach out

If you select this option, you will be directed to **Targeted chatbot settings**. Click on **Installation** to get the code. Once you or your teammate has the code, you can copy it and paste it in the admin area of your site, on whichever page(s) you'd like the widget to appear.
