Understanding the Bookings removed metric

If the specific [Resource pool is included in multiple Master pages](#), the **Bookings removed** metric shown for each Booking page is the total number of bookings taken away from that Booking page across all Master pages.

Bookings can be removed from a Booking page due to cancellations, rescheduling, reassignments, or no-shows.

- Bookings removed due to cancellations:** This happens when a Customer cancels a booking that was originally scheduled on the Master page that included the specific Resource pool, or when a User cancels a booking or requests the booking to be rescheduled.
- Bookings removed due to rescheduling:** This happens when a Customer reschedules a booking and the booking is assigned to a different Booking page from the original Booking page that was assigned. In this case, the **Bookings removed** counter will go up by one for the original Booking page that the Customer scheduled with. The **Bookings received** counter will go up by one for the new Booking page that the Customer rescheduled with.
- Bookings removed due to reassignment:** This happens when a User reassigns a booking from one Booking page to another. In this case, the **Bookings removed** counter will go up by one for the original Booking page that the booking was reassigned from. The **Bookings received** counter will go up by one for the new Booking page that the User reassigned the booking to.
- Bookings removed due to no-shows:** This happens when a User marks a booking as a no-show. The booking marked as no-show needs to have been originally scheduled on the Master page that included the specific Resource pool.
